

JConcepts - Aero S-Type Heckflügel-Mittelstrebe, 2 St. (Passend für J0173, J0181)

Divide and conquer with the new wing divider by JConcepts. The leader in 1/10th off-road wing development has arrived with another test and tune option. The center wing divider is simple, yet effective and together with wings like the S-Type, can provide additional stability and performance needed. The center divider has built-in adjustments that allow the driver to alter the height in order to match conditions at hand.

Simply trim the item to the cut-lines shown, align to one of several JConcepts Aero wings and ream holes to mount directly to the wing already placed on the vehicle. The part is light-weight and features the JConcepts leading edge wing chamfer which match existing side-dams. Special consideration has been made to line-up with the Aero wing including a hard bevel on the base for better fitment and more air channeling.

The center divider has already been used with success in competition. Ryan Cavalieri dressed the Team Associated B6 with the new option part during the JConcepts Spring Indoor Nationals held at Tacoma R/C Raceway in Tacoma, WA and Summer Indoor Nationals in Chandler, AZ. After two TQ's and two A-main victories at each event, Ryan described the divider as one of his favorite new tuning parts and will be on his car or in his box at each event.

#J0182

Features:

- JConcepts style, function
- Versatile design, increased stability
- Multiple cut-lines for tuning
- Durable material
- Two pieces included per package
