HV Hyper LCG Modified GRAPHENE-3 5000mAh Hardcase Akku - 7.6V LiPo - 120C/60C

Pushes LCG Design to the next level.....Hyper low, ultra light weight.
Even more opportunities to set your handling on point with our battery balance weights.

We present our LiPo Competition Car Line batteries for 2019!

Our current Competition Car Line batteries enjoy great popularity and are used successfully in many classes worldwide.

With the new 2019 generation the battery technology experiences a further boost. With Graphene 3 cells we take the next step in Graphene development and achieve more performance and an even more ideal weight!

Graphene-3 reduces the internal resistance of the cells and ensures less heating under load. This guarantees maximum performance over the entire duration of the race.

The High Voltage technology achieves maximum power through the use of HV-LiPo cells. These cells can also be charged up to 4.35V/cell without any problems. For charging up to 4.20V/cell, the new cell generation is characterized by a significantly improved service life.

The P5 gold contact connector system leads to a reduced resistance due to a larger contact area.

You can see the complete Competition Car Akku Line HERE!
